lagged dwell,
which matters for
host design.

Attendance Quality

This event behaved like a high-retention SpatialChat experience: people stayed, spread across rooms, and formed a durable live presence rather than a short webinar-style spike.

86.7% of attendees stayed at least 30 minutes, while 89.2% explored multiple rooms.

DWELL DISTRIBUTION

LIVE CONCURRENCY OVER EVENT WINDOW

Room Effectiveness

Room performance should be read as a dwell network, not just a headcount table. The best rooms combine unique traffic with enough dwell to justify programming weight.

Keynote Room led with 5539.1 attendee-minutes.

Room	Attendees	Total Dwell	Dwell Share
Keynote Room Stage • Gateway	83	5539.1 min	 50.6% of total room dwell
Emerald Table Room (2) Spatial room • Anchor	40	913.2 min	 8.3% of total room dwell
Emerald Idea Garden (2) Spatial room • Connector	52	803.5 min	 7.3% of total room dwell
Sapphire Table Room (1) Spatial room • Supporting	38	676.8 min	 6.2% of total room dwell
Emerald Table Room (1) Spatial room • Supporting	37	650.3 min	 5.9% of total room dwell
Emerald Idea Garden (1) Spatial room • Connector	53	643.0 min	 5.9% of total room dwell
Sapphire Table Room (2) Spatial room • Anchor	27	535.6 min	 4.9% of total room dwell
Sapphire Idea Garden (1) Spatial room • Supporting	43	437.2 min	 4.0% of total room dwell

Movement & Journey Map

Movement is the SpatialChat differentiator. This map shows which rooms attracted the most dwell and which transitions carried people through the event.

The dominant attendee journey was Keynote Room, repeated by 9 attendees.

The dominant attendee journey was Keynote Room, repeated by 9 attendees.

The strongest anchor rooms were Keynote Room and Emerald Table Room (2), which is why the layout behaved more like a sequence of destinations than a single central stage.

Attendee Segmentation

Personas convert a raw roster into a host-readable map of who explored, who connected, and who mainly expressed value through presence rather than visible interaction.

Connector, Explorer, Contributor, Observer, and Drop-in labels are assigned from event-relative behavior, not a fixed global rulebook.

Explorer

68 attendees averaged 149.2 minutes with an average engagement score of 53.5. Interaction rate inside this segment was 2.9%.

Observer

9 attendees averaged 50.9 minutes with an average engagement score of 31.6. Interaction rate inside this segment was 0.0%.

Drop-in

4 attendees averaged 4.2 minutes with an average engagement score of 24.8. Interaction rate inside this segment was 0.0%.

Connector

2 attendees averaged 255.1 minutes with an average engagement score of 88.8. Interaction rate inside this segment was 100.0%.

Top Attendee Roster

The top end of the roster shows who combined dwell, movement, and tracked actions. These people are useful examples when you explain event quality back to the host.

Arty Starr set the pace with 335.4 minutes and 93.1 score.

Badge Guide

Badges are optional overlays on top of the stable persona model. They highlight standout participation patterns without turning the report into a telemetry dump.

Read badges as signals, not titles. Personas stay canonical; badges add concise flavor.

Mark	Badge	Count	Meaning
	Resource Curator	1	Shared useful materials or artifacts that likely helped others navigate the event.
	Chat Catalyst	4	Kept the conversation moving through strong text-based participation.
	Front Row Presence	2	Maintained a strong on-camera presence during meaningful stretches of the event.
	Visible Facilitator	4	Stayed live on-mic long enough to signal active facilitation or spoken participation.
	Top Explorer	16	Moved intentionally across multiple rooms instead of staying in a single destination.
	Steady Presence	14	Stayed meaningfully engaged for a long stretch of the event.

Interaction Analysis

Action counts do not replace dwell, but they do show where the event produced visible behavior that hosts can deliberately amplify in future runs.

Top tracked action: Chat messages with 14 total events.

Chat Messages		14
Mic Toggles		13
Camera Toggles		6
Elements Shared		3

Recommendations

These recommendations are grounded in the actual room network, named attendees, and measured dwell/interaction balance from this event.

Treat this as a host debrief, not a generic event template. The best next actions come directly from the spaces and behaviors that already worked.

Keynote Room absorbed 5539.1 attendee-minutes across 83 people. Preserve it as the primary anchor room and put the most important host moments there.

Exploration was a strength: 89.2% of attendees visited at least two rooms, and Emerald Table Room (2) retained 40 unique attendees. Keep the hub-and-spoke layout.

Tracked interaction stayed low at 4.8% even though 86.7% stayed at least 30 minutes. Use on-stage prompts and room hosts to convert dwell into chat, mic, or collaboration behavior, especially among attendees like Arty Starr who already sustain long sessions.

Use Keynote Room as the orientation and conversion surface. That room consistently acted as the entry point for the attendee journey.

Keep high-value content in Emerald Table Room (2), Sapphire Table Room (2). Those rooms held the longest average dwell and behaved like sticky destinations.
