UNIQUE ATTENDEES

83

PEAK CONCURRENCY

68

Executive Summary

Twilight City - Thinkies World drew 83 attendees, reached a peak concurrency of 68, and held people for an average of 134.1 minutes. 86.7% of attendees stayed at least 30 minutes, which points to strong event stickiness rather than short drop-in behavior.

Movement quality was a clear strength. 89.2% of attendees visited at least two rooms and the average attendee explored 5.27 rooms. The room network was anchored by Keynote Room and supported by Emerald Table Room (2).

Arty Starr set the pace for the cohort with 335.4 minutes, 8 rooms visited, and an engagement score of 93.1.

Immediate Readout

Keynote Room absorbed 5539.1 attendee-minutes across 83 people. Preserve it as the primary anchor room and put the most important host moments there.

Exploration was a strength: 89.2% of attendees visited at least two rooms, and Emerald Table Room (2) retained 40 unique attendees. Keep the hub-and-spoke layout.

Tracked interaction stayed low at 4.8% even though 86.7% stayed at least 30 minutes. Use on-stage prompts and room hosts to convert dwell into chat, mic, or collaboration behavior, especially among attendees like Arty Starr who already sustain long sessions.

Use Keynote Room as the orientation and conversion surface. That room consistently acted as the entry point for the attendee journey.

Keep high-value content in Emerald Table Room (2), Sapphire Table Room (2). Those rooms held the longest average dwell and behaved like sticky destinations.

1. Attendance Quality

The attendance pattern skewed toward quality over volume. Median dwell reached 164.3 minutes, which means most attendees stayed far beyond a quick check-in. The audience mix was 78 anonymous guests / 5 members, which shows the room held both members and guest access paths for long sessions.

High-retention attendees were not limited to one person. Mario also stayed for 174.9 minutes, which reinforces that this was a durable event, not a single outlier driving the averages.

TOP ATTENDEES

Attendee	Type	Minutes	Rooms	Actions	Score	Persona
Arty Starr	Team Admin	335.4	8	12	93.1	Connector
Mario	Admin	174.9	8	14	84.4	Connector
Eugenia • Tech Support	Anonymous Guest	180.0	5	5	82.2	Explorer

2. Room Effectiveness

Keynote Room behaved like the central anchor, collecting 5539.1 total attendee-minutes across 83 unique attendees. That combination of reach and dwell makes it the strongest space for host framing and orientation.

The strongest supporting rooms were Emerald Table Room (2) and Emerald Idea Garden (2). Together they show that attention did not stay trapped in a single hub; attendees were willing to move into differentiated spaces when the event gave them a reason.

TOP ROOMS

Room	Type	Attendees	Total dwell	Avg / attendee
Keynote Room	Stage	83	5539.1 min	66.7 min
Emerald Table Room (2)	Spatial room	40	913.2 min	22.8 min
Emerald Idea Garden (2)	Spatial room	52	803.5 min	15.4 min
Sapphire Table Room (1)	Spatial room	38	676.8 min	17.8 min
Emerald Table Room (1)	Spatial room	37	650.3 min	17.6 min
Emerald Idea Garden (1)	Spatial room	53	643.0 min	12.1 min
Sapphire Table Room (2)	Spatial room	27	535.6 min	19.8 min
Sapphire Idea Garden (1)	Spatial room	43	437.2 min	10.2 min

3. Movement and Exploration Intelligence

The dominant journey motif was Keynote Room, repeated by 9 attendees. That pattern is useful because it shows where the event naturally handed people from orientation into core programming and then into secondary engagement.

With 89.2% of attendees exploring multiple rooms, this event behaved like a true SpatialChat environment rather than a single-session webinar. The room graph matters here because movement itself is part of the engagement signal.

COMMON JOURNEY MOTIFS

Path	Attendees
Keynote Room	9
Keynote Room → Emerald Table Room (1) → Emerald Idea Garden (1) → Keynote Room → Emerald Table Room (2) → Emerald Idea Garden (2) → Keynote Room	7
Keynote Room → Emerald Table Room (1)	3
Keynote Room → Sapphire Table Room (1) → Sapphire Idea Garden (1) → Emerald Idea Garden (1) → Keynote Room → Emerald Table Room (2) → Emerald Idea Garden (2) → Keynote Room	3
Keynote Room → Emerald Table Room (1) → Emerald Idea Garden (1) → Sapphire Idea Garden (1) → Emerald Idea Garden (1) → Keynote Room → Emerald Table Room (2) → Emerald Idea Garden (2) → Sapphire Idea Garden (2) → Emerald Idea Garden (2) → Keynote Room	2
Keynote Room → Sapphire Table Room (1) → Sapphire Idea Garden (1) → Emerald Idea Garden (1) → Keynote Room → Emerald Table Room (2) → Emerald Idea Garden (2) → Sapphire Idea Garden (2) → Emerald Idea Garden (2) → Keynote Room	2

4. Participation / Interaction Analysis

Tracked interaction was lighter than dwell. Only 4.8% of attendees generated at least one tracked interaction event, even though the top action family, Chat messages, still produced 14 total events.

That mix suggests a socially exploratory event with strong presence and movement, but lighter visible instrumentation than a workshop or deeply collaborative session. The right interpretation is not low value; it is that dwell outpaced explicit action logging.

5. Attendee Segmentation

The attendee base split into 2 Connector personas, 68 Explorers, and 0 Contributors. That segment mix helps separate people who drove visible interaction from those who mainly expressed engagement through staying and moving.

Arty Starr is a clear example of a high-engagement attendee, but the cohort also includes long-stay Observers who may need stronger live prompts to convert into visible actions.

Personas use relative event scoring and behavior thresholds rather than generic global baselines, so they stay useful for one-off hosted events.

This memo is generated from exported SpatialChat analytics records for the specified event window. Dwell and journey metrics are reconstructed from room sessions; concurrency uses cleaned ingress timelines when valid and falls back to attendee session overlap when needed.
