01 — ATTENDANCE QUALITY

Who Showed Up, and Did They Stay

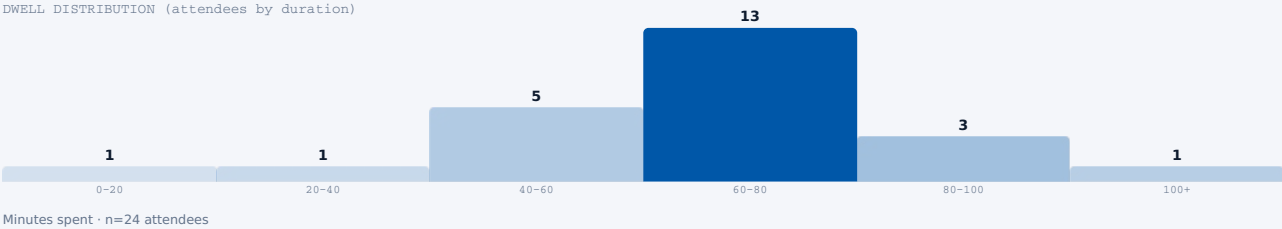

With a **median dwell of 69.7 minutes** and 91.7% of attendees staying past the 30-minute mark, this event hit genuine commitment numbers. On SpatialChat, median dwell above 45 minutes is strong — above 60 is exceptional. Cecil's hit 69.7.

Peak concurrency of **20 of 24 total attendees simultaneously present** (83%) means this was a cohesive shared moment, not a drop-in stream. The concurrency curve shows a sharp ramp between 11:00-11:20 AM, peak at 11:20-11:35, then a clean wind-down — the shape of a structured event with a clear program arc.

KEY SIGNAL

Median > mean (69.7 vs 62.9) means the distribution is *left-skewed* — a small number of early departures pulled the average down, but the bulk of the cohort stayed well past the hour mark. This crowd was committed.

DWELL DISTRIBUTION (attendees by duration)

02 — ROOM EFFECTIVENESS

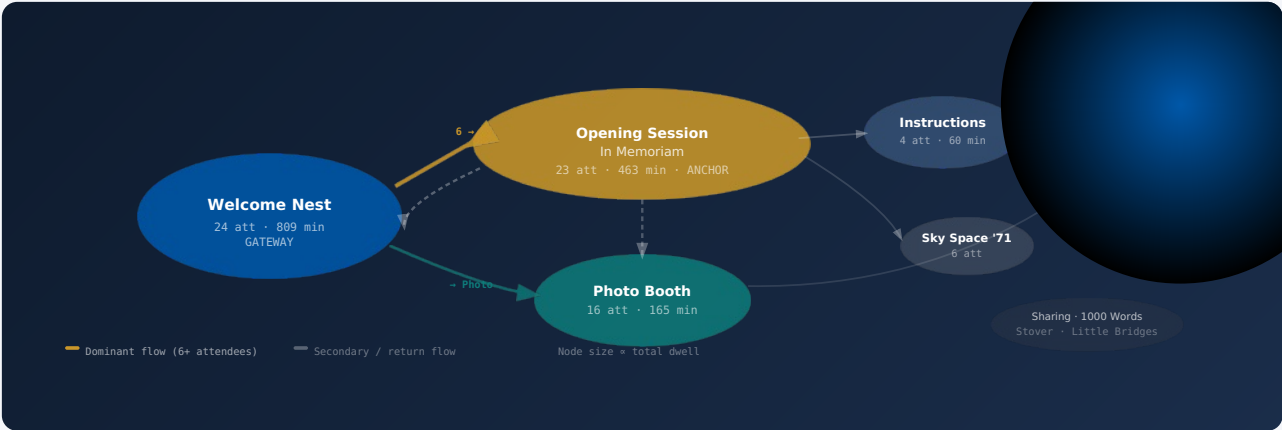

Where People Actually Went

ROOM	ROLE	ATTENDEES	TOTAL DWELL	AVG / PERSON	SESSIONS	DWELL SHARE
Welcome Nest	GATEWAY	24 / 24	808.97 min	33.7 min	93	54%
Opening Session - In Memoriam	ANCHOR	23 / 24	463.15 min	20.1 min	40	31%
Photo Booth	ANCHOR	16 / 24	165.50 min	10.3 min	25	11%
Instructions	SUPPORTING	4 / 24	60.25 min	15.1 min	13	4%
Sky Space - Class of '71 Rm 2	SUPPORTING	6 / 24	4.98 min	0.82 min	9	<1%
Open Gallery: Richardson Garden	SUPPORTING	4 / 24	4.50 min	1.12 min	4	<1%
Sharing Space · 1000 Words · Stover Walk · Little Bridges	SUPPORTING	1-4 / 24	<1 min each	—	1-4	<0.1%

THE DWELL CLIFF

Rooms 1-3 captured 96% of all attendee-minutes. The remaining 7 rooms combined for <4%. This isn't a failure — it's a signal. Either enrich the peripheral rooms with content worth pausing for (photos, memory artefacts, video clips), or streamline the space to concentrate energy where it naturally flows.

How People Moved Through the Space

The dominant arc was **Welcome Nest → Opening Session → Welcome Nest**, completing a ceremonial out-and-return loop. Six attendees followed this exact path verbatim; another 8 extended it with Photo Booth before returning to Welcome Nest.

Welcome Nest's 93 sessions (vs 24 attendees) reveals it was used as a *recurring home base* — attendees returned to it multiple times between excursions, not just once. That's hub behavior, not just gateway behavior.

Who Was in the Room

Connector
3
Score ≥ 75 · multi-room · high actions
Facilitated the event. Drove megaphone use, chat, mic toggles. Pritina Irvin (99.2), Doe Thomas (81.4), Ana Livia (76.7). These three generated **all 141 tracked actions** combined.

Explorer
14
Score 40-79 · 3-8 rooms · light actions
The plurality. Moved through the space purposefully, averaging 4+ rooms, spending quality time in all 3 core rooms. Zero tracked actions — but strong dwell. Presence was the participation.

Observer
7
Score <40 · 1-2 rooms · 30-50 min
Present and attentive. 1-2 room visits, lighter dwell. Appropriate posture for a ceremonial event. Roger Johnson (40 min), Lance & Jalyn (40 min), Paula Nold Doe (24 min). Hugh Robinson: sole 1-room attendee.

What People Actually Did

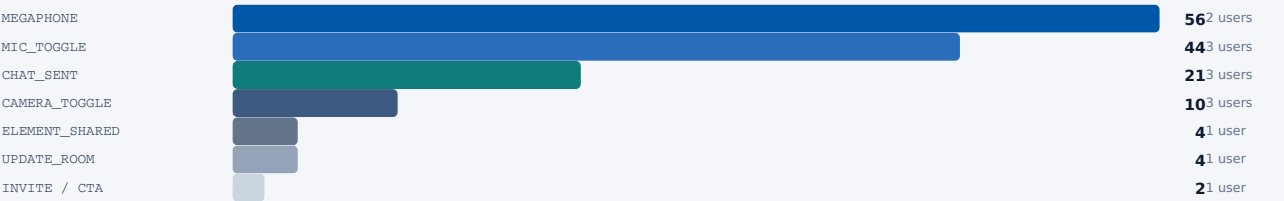

Only **3 of 24 attendees** (12.5%) generated tracked platform actions. All 141 actions came from Pritina Irvin, Doe Thomas, and Ana Livia — the three Connectors who were almost certainly facilitating the event.

This is the right read: the dominant action was **MEGAPHONE_TOGGLE (56 events)** — a host/broadcast tool, not a participant tool. The event was ceremonial, not collaborative. The other 21 attendees were there to witness and remember, not to generate data.

THE RIGHT INTERPRETATION

Low interaction rate on a memorial event ≠ low engagement. Dwell time and exploration are the honest signal here. 13 attendees stayed 60-80 minutes with zero tracked actions — they were present, not absent.

ACTION MIX (all 3 interactive users combined)

What to Do Next Time

1 Keep the multi-room format — it earned its keep

95.8% multi-room rate and 3.54 avg rooms visited confirm the spatial design worked. The Welcome Nest → Opening Session arc emerged naturally and should be explicitly programmed into future events. Don't flatten this to a single room.

2 Enrich or retire the peripheral rooms

Sky Space, Richardson Garden, Sharing Space, 1000 Words, Stover Walk, and Little Bridges combined for <4% of dwell across 6 rooms. Add content worth lingering over — class photos, video clips, memory artefacts — or reduce room count to concentrate energy where it flows naturally.

3 Use the Photo Booth arc deliberately

The Welcome Nest → Opening Session → Photo Booth sequence appeared in 8+ journeys organically. Codify it: after the ceremony, have a host announce "head to the Photo Booth for a group moment." This converts an accidental flow into a program beat.

4 Seed Connectors deliberately across rooms

Pritina Irvin, Doe Thomas, and Ana Livia drove all social facilitation. For future events, formally position 2-3 hosts in different rooms during free-movement phases to catalyze the 14 Explorers who have dwell appetite but light action footprints.

5 Add one prompted interaction moment

For a social/celebratory follow-on event (vs memorial), add a single explicit prompt — a shared chat question, a Photo Booth challenge, a poll. The Explorer cohort is clearly predisposed to engage; they just needed no reason to type during a ceremony.

6 Invite early — Hugh Robinson arrived at 11:07 and left at 11:17

The sole non-explorer arrived 28 minutes after Pritina opened the space and stayed 10 minutes. Send join reminders 15 minutes before open to capture latecomers before the main session pulls everyone into Opening Session.
